Professor J. Lederberg
Principal Investigator
Sumex Computer Project
Stanford University Medical Center
Stanford, California 94305

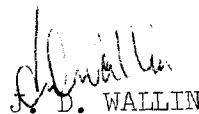

Dear Professor Lederberg:

The Clinical Investigation Center at the Naval Regional Medical Center, Oakland is presently conducting a study on the management of hypertension utilizing paramedical personnel and computer techniques. We are currently utilizing the decision system at the Lawrence Hall of Science, University of California, Berkeley.

We are interested in exploring the possibility of partaking in the Sumex project. I have enclosed a proposal for such a program for your consideration. I am also forwarding a copy to Dr. Carl Brewer at the National Institutes of Health.

Your attention in this matter is greatly appreciated.

Respectfully,

J. D. WALLIN

Director, Clinical Investigation Center

Friday pm. 4/18/75.

This just arrived in the mail. If enough of you have received it before our Tuesday telecon, I hope we might give it at least a preliminary review.

My apologies for the rush. It has taken some doing to get even this much information from the applicant (Dr. Baer of Metadata, who I assume is under contract with the Naval RMC.

Josh. L.
